## SURGICAL/ANESTHETIC AND MEDICAL CONSENT FORM Canine Neuter

The following procedures will be performed today:

**Pre-Anesthetic Testing** – Because of our commitment to providing you with the highest quality of veterinary care, we require pre-anesthesia testing. Each surgical or anesthetic procedure has some risk involved. Advances in anesthesia have made routine procedures relatively safe, but occasional problems can occur due to pre-existing conditions not evident on physical examination. If there is any indication of an abnormality, we will either contact you before proceeding or take steps necessary to ensure the safe care of your pet.

### HEALTH SCREEN I

This is the minimal required bloodwork for any healthy young pet undergoing an anesthetic procedure.

- ALT (liver)
- Creatinine (kidney)
- PCV (detects anemia)
- Platelet estimate (clotting ability)
- Total Protein (assesses hydration and protein level)

**IV Catheterization** - for fluid therapy, IV medication or any emergency drugs if necessary

**Fluid Therapy** – intravenous fluids to maintain normal blood pressure, preserve hydration and ensure adequate blood flow to vital organs

**Anesthesia/Monitoring** – respiration, blood oxygen level, heart and blood pressure

**Anesthesia** – pre medication, IV and gas anesthesia

**Surgical Procedure** - castration

**Recovery Monitoring** – including pain assessment

**Pain Medication Dispensed** – when necessary

**Hospitalization**

**Discharge Instructions**

**Total Cost: \$454.00**

---
